locality in grammar from narrow syntax to interfaces investigates the operation of locality conditions in syntax and semantics from a cross linguistic perspective it is claimed that there are two different types of locality conditions one is the generalized minimality condition gmc and the other is the phase impenetrability condition pic this book demonstrates that these locality conditions play different roles in different computational components of human language and therefore cannot be unified as one constraint as proposed in the literature the main idea of the book is that the two different locality conditions are sensitive to the difference

between syntactic derivation and semantic interpretation and that of overt and covert syntactic derivations further investigation shows a more fine grained distinction must be made between syntactic computations it is true that gmc does not constrain overt syntactic derivations and pic does not play a role in semantic interpretations however they both regulate covert syntactic computations this book will inform postgraduate students and scholars in the field of linguistics
